The NEW SUPER SEEKERS look combines the CLASSIC look of the sixties, BROWN blanks with a TANGERINE tint with STATE OF THE ART MATERIALS.

Most fisherman have bought or read about the advancement of today reels such as American made Avet and Accurate reels that offer anglers unbelievable drag setting and cranking power

You need a rod to match these powerful reels, that is why we designed the SUPER SEEKERS SERIES, The new blanks are manufactured from two STATE OF THE ART materials with our new EH04 resin system.

The new SUPER SEEKERS BLANKS are the most POWERFUL blanks SEEKER has ever built. We believe these blanks have the GREATEST lifting power and the fastest RECOIL of any blanks available to the fisherman today.

Using "S" glass EPOXY AND 120 GRAM CARBON FIBER and the EH04 resin system instead of "E" glass in the blank equals 3 times the compression strength of "E" glass.

WHY IS THIS IMPORTANT TO FISHERMAN

When blanks break they, most always break on the bottom side due to compression, the top part of the blank will stretch more then the bottom can compress.

The more compression strength the blank has the greater the LIFTING power and Faster RECOIL the blank will have.

SHOULDN'T YOUR NEXT ROD OR BLANK BE A SUPER SEEKER?
